Subject: Incident Alert: Automated Containment of Server Access Attempt

Dear Manager,

This alert confirms that a brute-force access attempt targeting one of our servers was detected today. Our security monitoring system (CrowdSec) quickly identified the unauthorized activity and automatically blocked the attacker's source through the firewall.

The attack was unsuccessful and fully contained. No data loss or system breach has been found. Preventive measures, including stronger access control and policy updates, are being implemented to stop similar attempts in the future.

Thank you,

SOC Analyst
